PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS
WARNING: Causes eye irritation. After ignition cartridge produces toxic gases such as oxides of sulfur and carbon monoxide. Fumes from ignited cartridge may be harmful if inhaled. Avoid contact with eyes, skin or clothing. Avoid breathing fumes. Wash thoroughly with soap and water after handling.

ENVIRONMENTAL HAZARDS
This product is highly toxic to wildlife. Check all burrows for signs of non-target species. If present, do not treat burrows. See Package Insert label for complete Environmental Hazards text, including Endangered Species Considerations.

CHEMICAL HAZARDS
Once ignited by the fuse, this cartridge will burn vigorously until trash or offer for recycling if available. If partly filled: To dispose of unused cartridges, soak in water, crush and bury at least 6 inches in loose soil. Never place unused product down any indoor or outdoor drain.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Use only for the sites, pests and application methods described on this label.

USE RESTRICTIONS: FOR OUTDOOR USE ONLY. This product may be used only to control pocket gophers, moles, woodchucks, rats, skunks, and ground squirrels in non-crop areas (including residential lawns, parks, golf courses, reforested areas, open fields) and in rangeland. Do not use where use of gas cartridges is prohibited by local ordinances. Do not use under buildings, homes, porches or any structure due to possible fire hazard. Only use inside of burrows and never inside of buildings. Product effectiveness may be limited in dry or porous soil which permits the escape of toxic gases from treated burrow.

PRIORITY APPLICATION:
Carefully observe areas to be treated. Apply cartridges only to burrow systems or dens currently being used by target species. Do not apply cartridges to burrows or dens known or believed to contain non-target vertebrate animals. Do not use cartridges where vegetation is dry and likely to catch fire.

How to use the GIANT DESTROYER — Use only inside burrows never inside of buildings.

APPLICATION STEPS:
1. Read and understand the specific instructions for the type of animal that you intend to control. Prepare hole for treatment as specified in instructions below for target animal control.
2. Collect sufficient soil, rocks or other noncombustible materials to close burrow system after insertion of cartridge.
3. Find main runway and clear any grass. Make sure the burrow or den hole(s) are large enough for easy insertion of cartridge and that all other openings are sealed.
4. Insert fuse firmly into cartridge end, making sure at least two inches of fuse protrudes from the cartridge. Position yourself so that you can light fuse and promptly insert cartridge into burrow. The minimum fuse burn time is 5 seconds.
5. Working quickly, light fuse and insert cartridge into hole fuse-end first. Never light the cartridge directly (or with less than 2 inches of fuse) nor hold a burning cartridge in your hand.
6. Cover hole immediately with rock or sod, taking care not to block it with soil, to create a hole. Follow application steps 1-6 above.

FOLLOW THESE INSTRUCTIONS:

MOLES (lawns, golf courses, non-crop areas) — To locate the main runway, look for fresh conical mounds of dirt. Select the freshest of these, remove plug and dig in the direction of main runway. If lateral to the mound is plugged, either dig past the plug or probe ground around the plug to locate main runway. Main runway will be found when probe meets little or no resistance. Follow application steps 1-6 above. If your excavations have divided main runway into sections, treat each portion.

NORWAY RAT (non-crop areas) — Use only where burrows are isolated from homes, barns, and other man-made structures. Do NOT use inside buildings or anywhere where gases could enter buildings. Follow application steps 1-6 above. Proceed to next closest burrow and treat as above.

GROUND SQUIRRELS (rangeland) Follow application steps 1-6 above. Proceed to next closest burrow and treat as above.

POTENTIALS (meadows, reforested areas) — Locate a characteristic fan-shaped mound with signs of recent gopher activity (e.g., recently excavated soil) at plugged burrow entrances. Determine if burrow is active by removing soil plug from center of each burrow entrance. Return the next day to see if the burrow opening has been re-plugged, indicating active use by a pocket gopher. DO NOT treat burrows that remain unplugged. Find the horseshoe-shaped depression on one side of the plugged mound. Locate the main runway by probing the ground 15-18” (38-46cm) from the mound, starting on the same side as the depression. The main runway has been located when friction on the probe is released and it falls into the runway. Using a shovel or trowel, dig down to the main runway, taking care not to block it with soil, to create a hole. Follow application steps 1-6 above. Treat all active mounds. One cartridge placed in the end of a runway should be sufficient. One or more additional cartridges should be used if treatment takes place in the middle of a runway or if runway is “T-shaped” to reach pocket gophers that may be on the untreated side of the plugged runway. Retreat in 5-7 days if new or residual activity appears.

For larger animals, longer or multiple runways, use more than one cartridge.

FIRST AID
Call a poison control center, doctor, or 1-800-222-1222 immediately for treatment advice. Have the product label with you when obtaining treatment advice.

If inhaled: Move person to fresh air. If person is not breathing, call an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. If in eyes: Hold eyes open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes then continue rinsing.

STORAGE AND DISPOSAL
Pesticide Storage: Store only in original container in a dry place inaccessible to children and pets. Pesticide Disposal: Nonrefillable container. Do not reusable or refill this container. If empty, place in trash or offer for recycling if available. If partly filled: To dispose of unused cartridges, soak in water, crush and bury at least 6 inches in loose soil. Never place unused product down any indoor or outdoor drain.
