Fl aus and Ticks outdoors:
To control fleas and pet ticks, apply to lawns, runners, and other areas that pets have been present. For best outdoor control of ticks, apply spray to vegetation, brush, branches, and other areas near habitations where ticks may harbor or frequent. Treat the entire area and retreat as necessary to maintain control. Do not apply to pasture or playground and do not allow animals and people to access treated areas until the application has dried. DO NOT SPRAY PETS WITH THIS PRODUCT. Treat dogs and cats with a product registered for use on animals.

Insect control in ornamental trees and landscapes:
For residential and commercial businesses, shrubs, ground covers, and bedding and foliage plants that will not be harvested for food, apply Onslaught FastCap Spider & Scorpion Insecticide in appropriate volumes of water to obtain thorough coverage. Apply as a full-coverage foliar spray, applying to the point of drip but not runoff. Treat active soil with an application of surrounding soil. Repeat treatments as necessary to achieve control, using higher application rates as pest pressure and foliage area increases. Repeat applications as necessary, however, do not exceed one every 14 days. Certain plants may be sensitive to the final spray solution. A small scale test is recommended to verify safety to ornamental plants. Spray and observe for one (1) week prior to application of an entire planting.

Insect control on lawns, turf grass, and turf:
For best results, lawn or turf grass should be mowed 1 – 2 days before treatment. With sprayers with a 4-gallon spray tank, use a spray volume of approximately 10 gallons per 1,000 square feet (430 liters/ha). With backpack sprayers, use a spray volume of 7.5 gallons per 1,000 square feet (320 liters/ha). For best results, spray solution must be closely applied to the ground where pests are present. Spray uniform coverage over the area and retreat as necessary to maintain control.

To kill Swarming Termites OUTDOORS ONLY
Apply spray mix as a coarse, wetting spray to exposed pests and to the damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Also, spray around the perimeter of woodpiles, wooden fence posts, wooden structures, or from the ground. Apply spray mix as a coarse, wetting spray to exposed pests and to the damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Also, spray around the perimeter of woodpiles, wooden fence posts, wooden structures, or from the ground. Apply spray mix as a coarse, wetting spray to exposed pests and to the damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Also, spray around the perimeter of woodpiles, wooden fence posts, wooden structures, or from the ground.

To protect the structure from which the swarm is coming. Use only as a contact spray to kill the swarmers as they emerge from the nest. After the swarmers have emerged and they have entered the structure, apply a second treatment of a smaller application rate. This will not be a substitute for a comprehensive termite control program.

To kill wood destroying pests OUTDOORS ONLY
Apply spray mix as a coarse, wetting spray when swarming termites are seen emerging from woodpiles, wooden fence posts, wooden structures, or from the ground. Swarming usually occurs in the spring or at other times when a termite colony becomes overcrowded and reproductive termites wings emerge and fly away to mate and establish new colonies. This treatment will control the swarming termites and will not protect the structure from which the swarm is coming. Use only as a contact spray to kill emerging reproductive (alated) worker and termite termites emerging from infested wood. This treatment is not a substitute for a comprehensive termite control program.

To kill wood destroying pests INDOORS ONLY
Apply spray mix as a coarse, wetting spray to exposed pests and to the damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Apply spray around doors, windows and door frames, and other areas where pests may hide or enter the house through cracks and crevices. It is necessary, small hole drills and spray into inaccessible wooden structural voids where pests are suspected.

Mosquito breeding sites:
Mosquito populations may be reduced by application of Onslaught FastCap Spider & Scorpion Insecticide to sites where mosquitoes rest, harbor, and breed. Apply spray solution into tall grass, shrubbery, and around backyards and lawns where these pests may rest or overwinter. Attend area is still.

Not for wide area mosquito abatement using aerial or truck mounted cold aerosol ULV sprayers and thermal fogging devices.

Precautionary statements:
Hazard to humans and domestic animals

CAUTION

Harmful if swallowed. Causes moderate eye irritation. Avoid contact with eyes or clothing. Wear protective eyewear (goggles, face shield or safety glasses with side shield). Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Environmental hazards:
This product is toxic to fish and other aquatic invertebrates. To protect the environment, do not allow pesticide to enter or run off into storm drains, irrigation ditches, gutters or surface waters. Applying this product in calm weather when winds is not predicted for the next 24 hours will help to ensure that wind or rain does not wash or volatilize pesticide off the treatment area. Running equipment over the treatment area will help prevent runoff to water bodies or drainage system.

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirement of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product into aquatic systems without previously notifying appropriate waste treatment plant authority. For guidance, contact the State Water Board or Regional Office of the EPA.

Physical or Chemical hazards:
Do not use this product in or on an electrical equipment due to the possibility of shock.

Storage and disposal:
Store in a cool, dry area under lock and key. Place as a pesticide storage area. Always store pesticides in the original container. Store away from food, pet food, feed, seed, fertilizers, and vermin supplies. Place liquid formulations on lower shelves and dry formulations above.

Pesticide disposal:
Store in a cool, dry area under lock and key. Place as a pesticide storage area.

</tbody>
</table>

**Lowest Use Scenario**

APPLICATION IN FOOD PROCESSING/HANDLING ESTABLISHMENTS:

APPLICATION IN FOOD PROCESSING/HANDLING ESTABLISHMENTS: Is permitted within food and non-food areas of food service and handling establishments (places other than private residences) excluding, but not limited to restaurants, meat processing plants, grocery stores, bakeries, food manufacturing and processing establishments, and food warehousing establishments. Do not treat areas where livestock is feed.

Food areas include areas for receiving, storing, packing, bottling, wrapping, boxing, preparing, edible waste storage, and enclosed processing systems, mills, and daycare centers. Do not treat areas that contain hot or cold storage rooms, but excluding areas where food may be prepared or held. Non-food areas include garbage areas, laundries, flour storage areas, room storage areas, kitchens, food rooms, machine rooms, garages, mop closets, and storage areas after canning or bottling.

**APPLICATION IN FOOD PROCESSING/HANDLING ESTABLISHMENTS:**

**General Information:**

- Use 1.0 fluid ounce (30 cc.) per gallon of water for heavy infestations or as an Insecticide. Agitate, and slowly add the remaining water.
- Agitate spray thoroughly before equipment before and after use. For dilution, add approximately half the required water to Onslaught FastCap Spider & Scorpion Insecticide before diluting by inverting it several times.
- Clean spray exposed food is covered or removed from the area being treated. Do not apply directly to exposed food.
- Do not apply directly to exposed food.
- The resulting tank mix may be applied in areas where these products are allowed to be used, but not exceed the rates listed above, using one gallon of spray mix per 1000 square feet of surface area.
- Do not apply when food-processing equipment is in operation or foods are being processed.
- Do not apply to classrooms while in use. Do not apply in institutions (including schools, libraries, offices, sports facilities, etc.) in the immediate area where occupants are to be present.
- Do not apply to any space or spray residence in the immediate area where occupants are to be present.
- Do not mix Onslaught FastCap Spider & Scorpion Insecticide with products containing certain pesticides (see product label).

**Indoor USE:**

**Application Rates for Indoor Structural Pest:**

**Spots or crack & crevice applications:**

- Spot or crack and crevice applications may be made while facilities in operation, provided that all work is done so as not to create air bursts, allowing air pressure to push insecticide deep into the space. Avoid applying to the point of excess spraying to outdoor areas to be occupied by people or pets. Do not treat any spot or crack and crevice inseccides, products, or any other currently registered pesticides unless expressly prohibited by the product label.
- The results may be applied to exposed surfaces and structures, but not exceed the rates listed above, using one gallon of spray mix per 1000 square feet of surface area. Do not mix Onslaught FastCap Spider & Scorpion Insecticide with products containing certain pesticides (see product label).
